

ControlBox -False

Place a label at the top of form1 and resize it. Name the caption as 'Sophisticated electronic voting machine.'

The program output appears as shown in Screenshot 1.

The ADO and RDO controls are normally not available in VB toolbox. To get them, go to 'project' menu, select 'components' and click the boxes against Microsoft ADO Data Control 6.0 (OLEDB) and Microsoft Remote-

Data Control 6.0 options followed by 'OK' button. Now you can see these control symbols in the general toolbox pane on the left-hand side of the VB window. Pick these symbols and place them on form1. A reference to RDO library must be made. So select 'references' from 'project' menu and click the box of Microsoft Remote Data Object 2.0 followed by 'OK' button. Then change properties of ADO and RDO as outlined under the 'Establish

ADO and RDO connections' sub-heading.

Several frames and controls are used in form1. So place each frame one by one, adjust their sizes and positions and place the respective controls in the frames.

Place three labels in form1 and change their size and caption property to SNo, ID No and Special Identification, respectively. Then place a text box below each of these labels. Change the properties

of labels as follows:

Alignment - 2-center
Appearance - 0-flat
BorderStyle - 1- Fixed Single
Caption - " "
dataSource - Adodc1

For displaying the voter's photo, place a frame on form1, change its name property to 'PHOTOFrame' and BackColor to 'dark green', and position and resize it as shown in Screenshot 1. Place OLE object in this frame, select 'create new' and 'bitmap image' options. Set its DataSource property to 'MSRDC1.'

Place 'mock poll' option button in this frame and change its properties as follows:

Name - Polltype
Caption - Mock poll
ForeColor - Dark green
BackColor - Light sky blue

Similarly, place option buttons for 'true poll,' 'start poll,' 'stop poll,' 'result' and 'total' on form1.

Then place two command buttons at the top and change their caption properties to 'power on' and 'exit' as shown in Screenshot 1. Between these buttons, place a label captioned as 'control unit':

Caption - Control unit
Alignment - 2-center
BackColor - Light blue
ForeColor - Blue
BorderStyle - 1- fixed single

For 'ballot unit' control section, place a frame on the right-hand side of form1, change its name property to 'BU-Frame' and BackColor to 'parrot green,' and position and resize it as shown in Screenshot 1. Place three labels and change their properties as follows:

Caption - Ballot unit
Alignment - 2-center
BackColor - Light blue
ForeColor - Blue
BorderStyle - 1- fixed single

After placing all these controls, the form appears as shown in Screenshot 1. Save the form with the name 'VM-form'.

Create Access database. Open MS Access, create new database and name
