

```
MsgBox "Vote registered"
Shapel(Index).FillColor = vbWhite
End Sub
```

When voting button is clicked, the vote is registered with the chosen candidate's symbol turning red, accompanied by message display "Vote registered." If any error occurs, the vote is not registered and "error" message is displayed.

The mock poll and true poll results are displayed by the code associated with the click event of 'results' button:

```
Private Sub RESULTS_Click()
Select Case NORPOLL
Case 0:
DISPLAYRESULT
If totvotes <> 0 Then
MSGRES = MsgBox(" Do you want to
clear results", vbYesNo, "POLL
RESULT")
If MSGRES = vbYes Then
CLEARRESULTS
Else
MsgBox "POLL DATA NOT CLEARED"
End If
End If
```

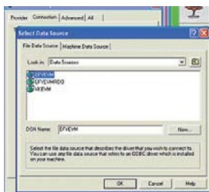

```
Case 1:
RTPASSWRD = InputBox("Enter pass
word to display and clear results",
"RETURNING OFFICER PASS WORD CHECK")
If RTPASSWRD = "RTOFFICER" Then
DISPLAYRESULT
```

```

If totvotes <> 0 Then
MSGRES = MsgBox(" Do you want to
clear results", vbYesNo, "POLL
RESULT")
If MSGRES = vbYes Then
CLEARRESULTS
Else
MsgBox "POLL DATA NOT CLEARED"
End If
End If
Else
```

Screenshot 9: Database selection in ADO connection

Screenshot 10: Data source in ADO connection

```
MsgBox "You are not authorized to
see results"
End If
End Select
End Sub
```

In the case of mock poll result, the program calls next procedures to display and clear the results. On the other hand, in the case of true poll result, it displays a message for the returning officer's password. If the entered password is correct (RTOFFICER), the program calls next procedures to display and clear the results. Else, a warning message "You are not authorized person" is displayed.

The click event of 'results' button displays the candidate-wise result us-

ing another user-defined procedure displayresult().

```
Private Sub
DISPLAYRESULT()
stmvotes.Text = mvotes
stfmvotes.Text = fmvotes
sttvotes.Text = totvotes
Adodcl.RecordSource =
"select * from
candtable"
Adodcl.Refresh
Adodcl.Recordset.
MoveFirst
i = 0
```

```
While Adodcl.Recordset.EOF = False
tl = CStr(Adodcl.Recordset.
Fields("caSTVOTES"))
RESULT.Text = CNAME(i).Caption +
" No of Votes: " + CStr(tl)
MsgBox " * " & CNAME(i).Caption &
" No of Votes: " & tl & " *",
vbOkOnly, "POLL RESULT"
i = i + 1
Adodcl.Recordset.MoveNext
Wend
End Sub
```

The type of poll is checked in the click event of 'results' button for clearing the results. It calls the procedure clearresults() to clear the result:

```
Private Sub CLEARRESULTS()
'clears result text boxes
initialize
'clears candidates votes
Adodcl.Refresh
Adodcl.Recordset.MoveFirst
i = 0
While Adodcl.Recordset.
EOF = False
Adodcl.Recordset.
Fields("caSTVOTES") = 0
tl = CStr(Adodcl.Recordset.
Fields("caSTVOTES"))
RESULT.Text = CNAME(i).Caption +
" No of Votes: " + CStr(tl)
MsgBox " * " & CNAME(i).Caption &
```
