

Choosing A SMART PHONE

Smart phones are small yet powerful handheld devices. These may differ from one another in forms and factors but share one common functionality—to keep the user connected—anytime, anywhere

■ ABHIJIT PAUL CHOUDHURY

Moore's law states, "The number of transistors would increase exponentially with time." With electronic devices

becoming compact, smarter, sharper and more powerful, this statement has come true and holds good for the future too. Today, mobile phone companies manufacture a wide range of handsets. The cost of handsets ranges from as low as Rs 1100 to around Rs

30,000 to 40,000 and above. Hence, everyone can afford to buy one. In recent years, the telecommunication market has boomed in India with 15 different service providers offering services at competitive prices.

As staying connected has become
