BlackBerry is one of the oldest manufacturers of smart phones. The first smart phone was developed keeping in view email as the main application. The company has a wide range of smart phones to cater to its customers. I have picked up BlackBerry Bold 9700 because the company has made a lot of modifications and improvements in this model. Weighing only 122 gm with battery, this phone's dimensions are 5.8cm x 5.8cm x 10.9cm (2.36" x 2.36" x 4.29"). The model has a large, high-resolution screen that displays over 65,000 colours.

The multimedia feature in this phone is good. It offers you 35 hours of multimedia playback with good sound quality. You can easily sync BlackBerry Bold 9700 with your laptop and transfer data, music or other important files to and fro. The in-built memory of this phone is only 256 MB, but it comes with an expandable memory. So, you can buy a flash card to increase the memory and get more out of the device. It also comes with a 3.2MP camera, which enables you capture the memorable moments with your family and friends. Moreover, the software of the phone supports video recording. Symbian is one of the most common operating systems used in India. The reason: Nokia, the largest handset selling vendor in India, bundles Symbian operating system in its mobiles.
