ent services.

Windows Mobile operating system is mainly used in HTC, O2 and a few other handsets. The main advantage of this software is that it works seamlessly with Microsoft Outlook.

Palm OS is one of the most user-friendly operating systems. It offers a number of third-party applications that can make end user experience better. The only limitation of Palm OS is that it has been used in limited number of handsets.

Last but not the least, Linux, an open source OS for handsets, is easy to use and can be customised as per

the user's needs. There are many vendors who use Linux in their handsets. Motorola is one such company that manufactures smartphones with Linux OS. The only demerit with Linux is that it is not yet as popular in the market as other operating systems. But it is gaining pace and may soon flood the market.

Improving the usability according to your needs

Once you have chosen to buy a certain smart phone, there arises the need to smarten up your phone. Well, there are various accessories that help you

achieve this. There are Bluetooth headsets, memory cards, screen protectors, pouches and cases, to name a few. Let's figure out how these accessories help you smarten your phone.

Memory card. Smart phones are equipped with multimedia features like high resolution cameras, onboard music and video players. In order to accommodate these, the memory needs to be large. Moreover, as latest models come with 5-megapixel cameras, the size of images is in megabytes. As smart phones come with a default memory of 256 to 512 MB, expandable memory is needed to accommodate all your data. If you want
