

The Neater And Faster Opening Windows (7)

The launch of Windows 7 has created a lot of buzz—amidst end-users as well as technologists and hardware manufacturers. We explore this new Microsoft offering and also the ‘new vistas’ that it throws open

■ VANDANA SHARMA

Windows XP was the last operating system (OS) success for Microsoft, but that happened almost eight years ago! After four years came Windows Vista. But it failed to impress the OEMs as well as users. But Windows 7, the latest Microsoft operating system (OS), has finally

done what its predecessor (Vista) could not do.

While the IT industry is viewing the Windows 7 launch as a multi-billion dollar opportunity, individual and corporate users are excited too, and looking forward to adopt the new OS. Many have already migrated.

To understand the reasons why

Microsoft is so bullish about the new operating system, we decided to go to the core of this euphoria and probe into what the OS has in it: (a) for technologists—to enthuse them to come out with innovations around the OS; (b) for the IT industry—to monetise the opportunities created by this launch; and (c) for end users.
