Rules for e-waste likely by March 2010

The government of India is in the process of developing a dedicated set of rules which would govern the management and handling of electronic waste, also known as E-waste. These will be put in the public domain for comments by March 2010.

E-waste, the end-of-life for electrical and electronic equipment, is characterised by two main attributes: it is hazardous while processing due to its content of toxic substances such as lead, cadmium, mercury and PCBs (polychlorinated biphenyls), but it is valuable due to the content of precious metals such as gold, silver, palladium and copper.

E-waste recycling by the informal sector, with little or no access to capital and technology, using highly hazardous and polluting techniques, is a reality in some of the densely populated regions of India. India today does not have a dedicated legislation for environmentally sound management of e-waste.

The proposed rules lay emphasis on responsibility of the producers—manufacturers and vendors, including financial responsibility, extending beyond the sale of equipment and setting up of take-back systems for effective management and handling of e-waste.

Indian SMEs optimistic about 2010

As the recession-hit year comes to a close, most SMEs in India believe that market conditions will improve in 2010, resulting in increased revenues and growth. According to a recent study, around 56 per cent of Indian SMEs are highly optimistic in their view that the coming year 2010 will be better in terms of overall business activity and profitability for their

Samsung Electronics appoints new CEO

Samsung Electronics has appointed Geesung Choi as its new CEO, as part of an organisational restructuring. In his previous role, Geesung Choi was heading the company's digital media and communications business. The move is aimed at increasing operating efficiencies and strengthen the independence of the company's business divisions.
