

NEC, Renesas finalise merger deal

NEC Electronics and Renesas Technology have entered into a merger agreement to integrate business operations at NEC Electronics and Renesas on April 1, 2010. The agreement is subsequent to the definitive agreement, which was signed on September 16, 2009.

The two companies will integrate their operations and generate synergies to establish a new semiconductor company that is capable of consistently achieving high earnings in order to withstand changing semiconductor market conditions. According to the duo, the integrated company (expected to be named Renesas Electronics Corporation) will provide globally competitive products in its three major product groups—MCUs, SoCs and discrete products.

Kodak sells OLED unit to LG

Eastman Kodak Company is selling all the assets associated with its organic light-emitting diode (OLED) business to a group of LG companies. The company did not disclose financial details of the deal. Kodak will have continuing access to its OLED technology for use in its products. Subject to customary closing conditions, the transaction is expected to close by the end of year 2009 or early 2010.

The companies also agreed to conclude their patent litigation, which involved a subset of their imaging technologies. Pursuant to a settlement agreement, Kodak and LG will request that the US International Trade Commission terminate the investigations initiated earlier this year following complaints filed by both companies in late 2008.

In addition, Kodak has also entered into a technology cross-licence agreement with LG Electronics, which will allow each company broad access to the other's patent portfolio. The licence agreement is royalty-bearing to Kodak.
