TEST & MEASUREMENT

Battery checker

Sanyo Energy has launched 'eneloop' battery checker to celebrate sales achievement of 100 million cells worldwide. The dog-shaped battery checker features an LED indicator on the eneloop's nose to show the power

status. By inserting an AA-size battery cell in the dog's body and pressing the switch on the chest, the LED on the nose indicates the remaining battery level using four different colours.

Two functional items in the form of food dishes and two bones are also bundled with the dog. By using a food dish as a spacer, an AAA-size cell can be inserted into the 'eneloop' for battery-level checking. The bone serves as a tool for taking out a battery from the dog's body. The battery checker is priced at Rs 1060.

Digital temperature indicator

Nippon Instruments (India) has launched a digital temperature indicator in flame-proof enclosure for class IIA and IIB hazardous atmosphere. Nippon-1010F offers IP55 degree of protection.

Made up of LM6 aluminium alloy, the enclosure weighs approx. 2 kg. A toughened glass of type A ensures clear visibility of display. The indicator can virtually accept all inputs such as thermocouples, 4-20mA resistance

temperature detectors (RTDs) and 0-1 virtual design and construction (VDC), amongst others.

The instrument can be used as a process indicator too. Its circuit is designed with high-performance operational amplifiers and rugged power supply for trouble-free performance. It is used

in chemical, pharmaceutical, fertiliser and oil plants.

Digital movement meter

Rishabh Instruments has introduced a digital movement meter with high vibration and shock withstanding capa-

bility up to 30g. It is suitable for ships, rail and aviation vehicles to measure AC and DC voltage and current at any position of use.

The meter offers accurate movement for measuring transducers' output and other industrial applications. The instrument is mechanically more stable than moving-coil and moving-iron metres.

Loom data monitor

Electrocom Technology India has launched its loom data monitoring system. The instrument is claimed to be one of the latest and most advanced versions available in loom production monitoring.

Besides production, it measures, stores and presents online information about various parameters connected with looms, such as efficiency, production loss, planning, beam falls, alerts etc.

Useful for textile industry, it presents a low-cost solution for weaving units for production, quality and cost analysis.

Microwave USB power sensor

Anritsu Company has introduced the MA24126A microwave USB power sensor that can make accurate power measurements from 10 MHz to 26 GHz over 60 dB of dynamic range. The sensor employs a 'dual path' architecture that provides true-RMS measurements over a broad frequency range and a

range of 0.1 μ W to 100 mW (-40 dBm to +20 dBm). It allows engineers and field technicians to conduct average power measurements on CW, multi-tone and digitally modulated signals used in all major cellular and microwave point-to-point (P2P) bands, as well as aerospace and defence applications.
