

Solar blinking LEDs

Swastik Enterprises has introduced solar-powered LED (light-emitting diode) string lights with 50 LEDs. These weather-resistant LEDs offer

an economical solution to light up your home, balcony, garden, etc. Available in six lighting modes, the system charges during the day,

automatically illuminates at dusk and switches off at dawn. You may operate the system manually too.

It offers light output in a set of all white or a set of multi-colour (red, blue, green and amber). As it does not require any extension cord, it is perfect for areas where it is difficult to run wiring. It can be used for festive decorations also.

MISCELLANEOUS

Slot cell inserting machine

Electromech has introduced a new technology in motor manufacturing by developing pneumatically operated paper inserting machine (model SCI-100). This

high-speed machine automatically prepares end-folds, sizes and shoots the insulating paper into the slots of the stator stack.

The programmable automatic indexing table makes the machine flexible and user friendly, which completely eliminates the need for changing gears. This contributes to minimum machine set-up time and thus enhances the productivity.

The new design also facilitates the

machine to adopt for different stack heights quickly without calling for additional tooling, thus reducing the tooling costs. The machine is available in two models to cover the wide range of frame sizes.

Vehicle tracking solution

Zentek Electronics and Communication has introduced Zetrack, a GSM/GPRS/GPS-based vehicle tracking and security solution. With Zetrack, you can track and manage your vehicle remotely as per your convenience from your home or office.

Zetrack comes with a mini USB for configuration and supports 2GB micro

SD card for data storage. Over-the-air programming (OTA) is also provided for remote configuration as well as upgradation of vehicle tracker. The unit has a voice port connection for two-way communication. It also comes with built-in battery support.

It detects vehicle ignition, vehicle immobilised control, vehicle parking light control, vehicle fuel sensing and temperature sensing, and keeps the user updated through SMS. The user also receives various SMS alerts about loss of GPRS connectivity, disconnection of antenna, device tamper, over speeding, low internal battery voltage, SIM card removal, SD card removal and mains supply cut.

Range of Economical, Reliable Printer Solutions from Maestros

R-50 Printer (Panel Mountable Design)

Process Control Instrument • Receipt printing

EP-50 Printer (Embedded Design)

Tariff Meter • Weigh scale • Handheld Instruments

Script-50 (Desktop Design, Mobile Printing)

Portable • Office automation product

STANDARD FEATURES

- 2", 203 dpi
- Clamshell easy paper loading
- RS 232 Serial interface

OPTIONAL FEATURES

- USB / Bluetooth interface
- Auto cutter
- Customised Solutions Available

Maestros™
