

Optimum process control means efficiency, reliability, and Analog ICs.

Our newest optimized mixed-signal solutions

Ultralow Noise, 24-Bit Σ - Δ ADC with PGA: AD7190

Expand the operating speed and precision of sensitive measurement instruments with the industry's best combination of data rate and noise-free resolution.

16-Bit User-Programmable Current and Voltage Output DACs: AD5422 Family

Single platform simplifies system design by offering improved performance and a high level of control functionality in a compact package.

36 V, Micropower, Dual, Single-Supply Amplifier: ADA4091-2

Eases front-end design by offering integrated input protection, high accuracy, reduced power, and very small package. Developed through advancements in Analog Devices' proprietary /Polar™ process technology.

Precision Instrumentation Amplifier: AD8221

Affordable and easy to use. Industry-leading performance in a small package for high channel density applications.

Current/Voltage Output Drivers: AD5750 and AD5751

Increase efficiency by offering best-in-class performance with the industry's highest level of accuracy and diagnostic capability.

Low Power, High Precision Analog Microcontrollers:

ADuC7060 Family

Combine 24-bit Σ - Δ ADCs with 16- and 32-bit ARM7TDMI® MCUs and Flash/EEPROM memory for unequaled multichannel data acquisition and processing performance.

Dependable systems, advanced manufacturing, secure environments: Analog Devices

Instrumentation and process control equipment manufacturers are helping their customers to achieve increased line efficiency, productivity, and safety by leveraging advancements in analog technology. For more than 40 years, designers of industrial equipment have relied on Analog Devices' innovations to distinguish their products and to control and protect their customers' valuable equipment assets. And in today's cost- and safety-sensitive industrial world the speed, precision, and integration of ADI process control ICs enable whole new levels of capabilities—and possibilities.
