

Deep enough?

MemoryPrime 2MEGA MEMORY BUILT-IN

NEW

Discover Deep Memory Performance.

Due to memory constraints, traditional digital storage oscilloscopes do not have the capability of displaying a complete electronic signal at a high sample rate. The GDS-1000A Series uses MemoryPrime technology to overcome the problems associated with memory constraints. By displaying complete signals with greater detail, the GDS-1000A Series can maintain a high sample rate over a wider horizontal range, without affecting performance. **Challenge yourself to go deeper, GDS-1000A!**

GDS-1000A Series Digital Storage Oscilloscope

- 150/100/60 MHz Bandwidth, 2 Input Channels
- Sample Rates up to 1GSa/s Real-Time Maximum, 25GSa/s Equivalent-Time
- 2M Points Record Length Maximum
- 2mV–10V Vertical Scale, 1ns–50s Horizontal Range
- Up to 27 Automatic Measurements
- USB and SD Interface Supported

For more information about the advantages of MemoryPrime technology, visit our website at www.memory-prime.com or consult your local distributor.
