

TRONTEK

**RECHARGEABLE
SEALED
MAINTENANCE
FREE LEAD
ACID BATTERIES**

12V 7.5Ah

6v/4.5ah to 12v/100ah.

(2v & 4v Models Available on request)

**Preferred by leading OEMs in
India and All over World**

Trontek SMF Batteries

(Manufactured in the most modern & contemporary Taiwan-Made Plant)

Have all the winning features:

- Lead-Calcium grid for extended life
- High discharge rate capacity
- Deep discharge recovery
- Low self discharge & long service life
- No memory effect & high performance battery
- Long life & hassle free power

iPhone 3G Supreme

The front bezel houses 136 flawless diamonds totalling 68 carats. On its back, the Apple logo comprises 53 diamonds, totalling 1 carat. The rare, single-cut 7.1-carat diamond acts as the front navigation button. The device is encased in a solid 22-carat gold case that weighs 271 gm.

Charge your mobile phone by hand

Now you can charge your mobile phone anywhere and any time! ideaForge Technology, a company founded by three IIT Bombay alumni, has introduced a hand-powered mobile phone charger called Roto Charger. It helps you tap power from your own self by the means of either cranking (wind-up mode) or rolling (roll-on mode) the device any time you need to top up charge on your phone to survive it the next hour or make that last call.

With Roto Charger, you can charge your mobile in two ways—by simply rotating a handle on the charger or by rolling the charger with one hand on any surface. According to the com-

Roto charger

pany, one minute of rotating the handle gives about three minutes of talktime and about 30 minutes of stand-by time.

It is claimed to be safe to use for the cellphone batteries. In fact, the lower charging currents can lead to a better battery life. The eco-friendly device is priced at Rs 450.

Multiple SIM technology

Comviva Technologies, formerly known as Bharti Telesoft, has developed a SIM (subscriber identity module) card that allows up to 10 users to subscribe to mobile services from the same handset with their own specific numbers.

The technology requires the user to dial a given number from the specific mobile phone and activate the SIM though a password. Once that is done, the user can receive and make calls and even recharge the account through a pre-paid coupon.

Comviva is currently in talks with several telecom service providers, including group company Bharti Airtel, to launch the services. The low-cost connectivity model could increase rural mobile penetration in India, where rural teledensity stands at just 20 per cent, compared to the urban teledensity of 95 per cent, hinting at a wide scope for expansion.

Intel unveils 48-core single-chip cloud computer

Intel has demonstrated an experimental 48-core Intel processor, nicknamed the 'single-chip cloud computer'. This futuristic chip boasts about 10 to 20 times the processing engines inside today's most popular Intel Core-branded processors.

The fully programmable 48 processing cores are the most Intel has ever had on a single silicon chip. Intel will integrate key features in a new line of core-branded chips early next year and introduce six- and eight-core processors later in 2010. The chip can operate on as little as 25 watts when idle, or at 125 watts when running at maximum
