

tronic fencing are in demand from big corporates, hotels and public security systems.

Lead with LED

Around two-third of the respondents came up with the 'LED will lead' slogan. Till date, the lighting industry uses traditional lamp sources in the residential segment and the general illumination market includes incandescent bulbs, fluorescent tubes and inexpensive halogen lamps. But of late, a strong move is evident towards energy-efficient lighting.

"Statistics suggest that lighting applications currently represent about 22 per cent of all energy consumption. This has resulted in increased demand for more energy-efficient lighting solutions, which has caused a shift towards LEDs. LED lighting technology can result in above 80 per cent and 50 per cent of power savings over traditional

Innovation warrants investment

Innovation-driven growth strategy is important to warrant new investment, as per the survey. Seventy per cent of respondents prefer to put their organisation in the growth curve by adopting new technologies. Use of existing facilities in innovative ways has also emerged as a popular choice in the survey.

Most of the respondents believe that the best approach is to recognise the value of innovation and knowledge exchange for future growth. According to Sapinder Singh, MD,

Energy efficiency will be a key term for 2010. We are going to explore automotive segment with new energy-efficient product range for two-wheelers and three-wheelers.

—Venkant Reddy, GM-Operation, Axiom

In lighting segment the products with high demand are electronic ballasts for linear and compact fluorescent tubes, electronic ballasts for HID and electrodeless EM induction lamps, electronic drives for various LED-based lighting solutions, electronic controls for energy management, home improvement and stage lighting.

—P.K. Sood, Chairman, Regnant

incandescent and fluorescent solutions, respectively," says P.K. Sood, chairman, Regnant.

Here, it is worth mentioning that India's lighting industry grew 12-15 per cent in 2009 despite a slowdown in real estate. CFLs were the fastest growing segment, growing at an estimated 25 to 28 per cent. India consumes around 200 million CFLs yearly, while about 150 million are produced locally. This gap in demand and supply can make it a minefield of opportunities for manufacturers.

Omega Products, an ideal step would be to enter the electronics security market in India. But according to

an advanced microcontroller, which is customised for the electrical metering market.

How to sketch a growth path

Firms usually plan their growth map keeping in mind following points:

- (a) Increase market share for existing products
- (b) Enter new markets with existing product portfolio
- (c) Diversify into new products or introduce a new product
- (d) Merge or acquire

But in the current economic scenario, firms are very cautious in

With more than 70 per cent of the Indian SMBs preferring one-stop shop buying for all their office equipment, this sector provides immense opportunity and potential for growth.

—M.B. Shin, Managing Director, LG Electronics India (LGEIL)
