STORAGE

High-speed USB drives

Kobian has launched the Mercury series of high-speed flash drives. These drives are designed with an innovative extension mechanism that allows the USB connector to slide out or slide in with a single flick of the thumb. Cap-

less design not only keeps dust and debris out of the drive but also ensures there is no cap to misplace or lose.

The drives combine style with technology. These have an elegant contoured pearl white body with a bright LED indicator that flashes during data transfer. The drives are also rugged enough to withstand harsh handling with their anti-shock and moisture-proof construction.

The Mercury series extends from 4GB to 64GB capacity and provides a fast USB2.0 connectivity.

Portable hard drive

KINGMAX, a memory module brand, has expanded its product portfolio by launching a portable external

hard drive. The KE-91 weighs merely 170 gm and has a USB interface, password-protected

data encryption, and file backup and enhancement software to maximise users' convenience. The 256-bit AES

encryption technology ensures the safety of personal data, the file backup software protects important data and the built-in software enhances writing/reading performance up to 53 per cent.

Flexible hard drive

Seagate has introduced the next evolution of its FreeAgent external hard drives—GoFlex storage solutions. The FreeAgent GoFlex storage family includes easy, plug-and-play portable and desktop drives, with an array of

interchangeable cables and desktop adaptors that allow each drive to adapt to the interface or device being used. GoFlex hard disk drives also provide interoperability between operating systems in order to work with both Microsoft Windows and Mac OS-X computers.

The GoFlex cable system enables the GoFlex and GoFlex Pro ultra-portable USB 2.0 drives to be upgraded to USB 3.0, eSATA or FireWire 800 connections simply by switching out the cable adaptor. Upgrade cables provide even more applications for drives. For example, the drive can be transformed into a continuous full-system backup, giving consumers the peace of mind that their files and system settings are backed up, while leaving the remaining capacity for basic drag-and-drop file transfer.

LIGHTING

PowerLED bollards

BINAY's garden light bollard comes in a rustproof metallic body with clear glass or clear acrylic glass on all

sides. The power LEDs are placed in a canopy on the top, and are fitted so as to give adequate thermal management, thus keeping the LED junction temperature low. The unit is mounted on a

pipe duly powder-coated in black. The entire assembly can be fixed to the ground by means of a flange at the end. The unit is protected to IP-65, and input voltage range is 90V-260V AC. Life is 15 to 20 years.

This product is available in two models: Elegant (replacement of 9W CFL; total LED lumens 600) and Power Tower (replacement of 18W CFL; total LED lumens 900).

LED path light

GlacialTech has released a nature-friendly LED path light. The GL-SD30 is a 34W, battery-powered LED flood light and takes an 11-15V/22-30V DC power supply. Batteries can be placed with these LED trail lights or, because of the safety of this low-voltage LED, power-supply cables for the SD30 can be buried in shallow ditches. With
