

CIRCUITS AND TUTORIALS

Looking for circuit ideas, e-books and video lectures on basic electronics? Visit the websites listed below to find all that you want

Talking Electronics

Talking Electronics is an interactive e-magazine on the Web that is basically intended for the beginners. The main aim of the website is to teach electronics in the simplest way possible. The website has a paid and a free section. The free section contains various circuit ideas, articles and tests to keep you up-to-date and check your knowledge on the subject. The paid section contains tutorials on microcontrollers and basic electronics, which can be purchased from the website by paying a nominal price. The entire information is also available on a CD. For any queries related to the website or circuits, e-mail talking@tpg.com.au

FC's Electronics Circuits

On this website, you will find a variety of circuits that are designed keeping in mind various practical applications. Most of these circuits are constructed using discrete components. Some of the circuits are based on microprocessors. The circuit are built using an open source drawing software called Xcircuit. Xcircuit is a cross-platform software that can be found on '<http://opencircuitdesign.com>'. The website links to various other websites categorised into electronics resources, vacuum tube links, electronics software tools, electronics kits companies, magazines, electronic circuits online, etc.

Discover Circuits

Maintained by David A. Johnson, this website contains various circuits under more than 100 categories. It has different sections like schematics, hobby corner, Dave's circuit, electronics resources and book corner. The website also links to various other websites that provide similar and innovative circuit ideas. For more information, e-mail discovercir@aol.com

All About Circuits

The name of the website says it all. This website contains various textbooks on electrical and electronics. It is categorised into six volumes on DC, AC, semiconductors, digital, reference and experiments, respectively. It also has video lectures, provided by Tim Fiegenbaum of North Seattle Community College. The topics covered are electronics systems, alternating current, inductors, capacitors, transformers and so on. Also, there is a forum where users can discuss problems or issues that they face when experimenting with circuits.
