

Need an Arbitrary Waveform Power Source? No Problem!

PROGRAMMABLE AC/DC POWER SOURCE

APS-1102

The APS-1102 is not only in the role as a precision AC/DC power supply but also a powerful analyzer, containing abundant features for the testing and characteristic analysis of power supplies, electronic devices, components and modules. The APS-1102 also allows free programming of outputs for the simulation of a power source with abnormal variations. The instantaneous interruption, frequency sweeping, voltage sweeping and arbitrary waveforms of power source can be easily generated in accordance with the test requirements. The measurement of Inrush Current, which occurs during power-on of a capacitor load, can be done easily.

FEATURES

- 5.7" Large LCD Display
- Measurement Functions : Voltage, Current, Power, Frequency, Power Factor, CF, and Harmonic Current
- Sequence Function Allows Programming of Output Patterns
- 30 Sets of SAVE/RECALL Memories
- USB Host as Standard for Remote Control

Voltage/Arbitrary Fluctuation Test Pattern

Creation of Arbitrary Waveform

In the Sequence Operation programming, DC, sine waves, square waves, and 16 arbitrary waveforms captured via USB interface can be used as components for sequence editing. Among total 255 sequence steps, as maximum capacity, the waveform, level and time duration can be set, and constant/keep/sweep can be chosen in each individual step. Arbitrary waveforms can be edited on the PC and transferred via USB interface to APS-1102 as the internal signal source for power output. 16 sets of waveform memory with 4k words waveform length each are available for arbitrary waveform generation and storage.

Channel Partner & Distributor in India
Integrated Services & Consultancy
an ESA Group Associate
