

Are you obsessed with process control? So are we.

The new Backpack™ Valve Actuator can help you make more products in less time by cycling select Nordson EFD valves 2–3 times faster than previously possible.

Incorporating advanced miniature solenoid technology, the Backpack mounts the solenoid used to open and close the valve directly on the valve's air cylinder instead of a separate fixture.

Its faster actuation makes it possible to achieve cycle speeds as high as 800 per minute, and produce smaller fluid deposits for assembling today's advanced medical devices.
