

TI's TPS92210 Single-Stage LED PWM Controller for White LED

Order **FREE** samples at www.ti.com/TPS92210-in

High-Performance Analog >>> Your Way™

TPS92210 Key Features and Benefits

- Flexible operation modes such as peak primary current, constant on-time and frequency modulation. The constant on-time mode implements single stage power factor correction.
- Cascaded MOSFET configuration results in 10 percent lower switching losses and easy start up compared to competitive devices.
- Dimming circuit provides smooth, continuous flicker-free linear LED current and eliminates TRIAC turn on ringing with non-dissipative in-rush limit circuit.
- Multiple protection features such as optocoupler-less over-voltage protection, thermal shutdown and advanced over-current protection to safely shut down LED driver.
- Programmable fault response, full shut down or shut down restart provides added flexibility in lighting applications.

Applications:

- TRIAC Dimmable LED Lighting Designs
- Residential LED Lighting Drivers for Retrofit - A19 (E27/26, E14), PAR30/38, GU10, MR16, BR
- Drivers for Down and Architectural Wall Sconces, Pathway and Overhead Lighting
- Commercial Troffers and Downlights
