

LED Dot Matrix Units

ROHM LED dot matrixes utilize original technology for a wide viewing angle and extremely high reliability. A broad lineup is available in different character heights, dot counts, and display colors for optimum compatibility.

Feature 1 Fine pitch ensures powerful expressiveness even at short distances

Fine pitch matrix display (1.2mm) is possible using ROHM PICOLED™, the industry's smallest chip LEDs, and by applying advanced assembly technology.

COB (Chip On Board)

Under Development

Even finer pitches will be possible by mounting LEDs directly on the board and joining them to the circuit pattern.

Display Area Comparison (7" 17 dots)

Feature 2 Expands design possibilities

Railway Arrival/Departure Displays

ROHM LED dot matrix units are used at train stations throughout Japan for clear display of important information.

Public Displays

Clear, high visibility is essential for public displays in order to maintain a safe environment.

High brightness over a wide angle

Potting Lens Dot Matrixes

ROHM Original Technology

Construction

<Chip LED Type>

Chip LEDs with reflector are used to direct light to the front.

<Potting Lens Type>

This type of configuration minimizes reflection of external light, resulting in superior brightness over a wide viewing angle.

Wide Viewing Angle

Clear visibility over a wide viewing angle is ensured (140° from all directions), even at angles difficult or impossible to see with conventional matrixes.
