STORAGE

Retractable USB Flash drive

Transcend Information, Inc. has launched the JetFlash 500 retractable USB flash drive in India. The stylish JetFlash 500 features a smooth sliding USB connector that eliminates the need for cap and effortlessly extends and retracts with a simple flick of the thumb.

With its user-friendly capless design, various colour and capacity options and smooth contoured shape, the JetFlash 500 is an ideal portable storage solution for users with busy and active lifestyles.

The JetFlash 500 comes in five vivid color options (orange, red, blue, green and purple) and capacities ranging from 2 GB to 32 GB.

Anti-scratch USB flash drives

Kingmax has launched the PD-02 USB flash drive with a streamlined appearance, slide USB connector and anti-scratch surface. Slide USB connector design of PD-02 makes it slim and the capless feature increases the convenience to use. With scratch-resistant material, users no longer have to worry about damage to the USB drive by other stuff in the bag.

The PD-02 is compliant with USB2.0 high-speed transmission and available in capacities of 2 GB, 4 GB, 8 GB and 16 GB.

LIGHTING

7W DC LED light

GlacialTech has launched a low-power light-emitting diode (LED) series for spotlights and floodlights. The GL-SD07 is suitable for outdoor pool lighting and path lighting, in addition to indoor usage. With typical power consumption of

only 9 watts and high power-driver efficiency of over 87 per cent, it is ideal for energy-conscious users who have low-voltage electrical circuits.

The GL-SD07 LED lights feed on a DC source of 11V-15V/22V-30V and last a minimum of 20,000 hours.

PCB service for LED applications

PCB Power India has launched a service to provide specialist metal-backed PCBs for high-intensity LED applications.

To ensure optimal light output and long life, high-power LEDs require good thermal management and high levels of heat dissipation. Insulated metal substrate (IMS) or aluminium-backed PCBs provide the necessary heat management technology.

PCB Power's IMS service offers highly cost-effective prototypes and small batch quantities of IMS PCBs, thanks to multi-panel technology. Combining several orders on a single production panel cuts the cost of

manufacturing and eliminates tooling charges.

COMMUNICATION

Narrowband VHF/UHF transmitter/receiver modules

Wireless solutions developer Radiometrix has introduced the CXT/CXR module family. This transmitter/receiver pair provides a complete remote control switch function in a module format, delivering reliable, long-range operation in situations where existing wide-band solutions cannot offer adequate range or where band congestion requires multiple channel operation.

Thanks to inclusion of easy-to-use, single-function controllers/actuators, the CXT and CXR modules are highly suited to tasks that just call for a simple on/off control function (such as flood light control and machine override shutdown), without the need for any additional external circuitry (such as a microprocessor or dedicated encoder/decoder IC).

The modules support data rates of up to 5 kbps.
