Since this information is subject to change, all those interested are advised to ascertain the details from the organisers before making any commitment.

The security and surveillance segment was hardly affected during the global recession that hit other sectors of the electronics industry hard. A survey by *Electronics Bazaar* magazine found out that even in 2009, when the growth in other segments was low, companies in this sector witnessed an average growth of 81 per cent. The survey indicated that in 2010, these companies expect an average organisational growth rate of about 110 per cent.

India needs a new semiconductor policy

As the global economic slowdown has impacted the semiconductor and electronics industry, it will take some more time to recover to earlier levels. Poornima Shenoy, president, India Semiconductor Association, therefore proposes that the Semiconductor Policy of 2007 be extended till March 2015. The extension will provide time to market the policy and improve India's prospects to attract investments.

S. Uma Mahesh, co-founder and CEO, Indrion Technologies, however, feels the need for updation of the semiconductor policy. According to him, "The policy did not consider the aspect of innovative design, particularly in relation to startups. The new opportunities that are coming up in the areas of intelligent automation, smart grids, energy efficiency, operational efficiency, ambient intelligence, etc, open up possibilities for India to become a global leader. But for this to happen, there is a requirement to invest in startups. The semiconductor industry needs encouragement and support through such policies. But the existing policy neglected the startups, so this should be corrected in the new policy."

Vivek Sharma, regional vice president (CS & SA), director, India design centre, STMicroelectronics, says, "The Semiconductor Policy of 2007 focused more on semiconductor manufacturing along with the manufacture of other products like PV cells, liquid crystal display (LCD) panels, etc. Now we need a policy that would focus on the overall domestic electronics industry.
