Solar PV module use set to soar

The capacity of photovoltaic (PV) cells and modules in India will cross 750 MW and 1250 MW by the end of 2010, estimates India Semiconductor Association. Solar photovoltaic is a key technology option to realise the shift to a decarbonised energy supply and is projected to emerge as an attractive alternate electricity source in the future.

Tele-density in India is 51 per cent

India ranks second worldwide, only behind China, in terms of having the largest telecommunication network. Tele-density in India has improved significantly over recent years and currently stands at 51 per cent. The country's mobile handset market is also expected to register robust growth in the near future.

BSNL to invest Rs 148 billion in 2010

BSNL will invest around Rs 148 billion this financial year and a similar amount the next financial year as part of its capex plans. The telecom giant will also use one-third of this capital to set up infrastructure in order to support its mobile business.

Videocon targets 100 million subscribers

Videocon, which has just recently entered the mobile phone market, aims to acquire 100 million subscribers within three years. Venugopal Dhoot, chairman, Videocon, is ready to invest Rs 140 billion to achieve this target.

Su-Kam forays into solar products

Su-Kam, a power back-up systems provider, has now diversified into manufacturing a wide range of solar products. It has introduced a solar home lighting system priced at Rs 2500. The system consists of two LED lamps, in-built SMF batteries, charge controller and solar panel.

Godrej launches LED TVs in Andhra Pradesh

Godrej Appliances has launched its Eon LED TVs in Hyderabad. The advanced backlight technology of these LED TVs enhances the movement of every pixel, which, in turn, enhances picture quality. Apart from LED TVs, Godrej has also introduced the entire range of televisions including LCD TVs and CRT TVs.

based lighting products and solutions amongst others.

NEC opens biometrics excellence centre

NEC Corporation, a network, communications and IT solutions provider, has set up a biometrics excellence centre in Bengaluru, aiming to accelerate the expansion of its global multimodal identification solutions and integrated security solutions business.

More than 200 of NEC's biometrics solutions have been utilised by a broad range of agencies in over 30 countries throughout the world. NEC will capitalise on its central competencies in engineering, geographic and technological expertise to drive the development of NEC centre.

The centre will enhance NEC's worldwide solution engineering capabilities in the expedited delivery of customised multimodal identity solutions.

EFY partners with ELCINA for ELCINA-EFY Awards

Electronics For You (EFY) Group has partnered with ELCINA Electronic Industries Association of India to promote *ELCINA Awards*—the country's oldest and most valued awards for the electronics industry. From 2010 onwards, the *ELCINA Awards* will therefore be rechristened as the *ELCINA-EFY Awards*. EFY and ELCINA also propose to work together to make the awards 'greener' by e-enabling the awards process and minimising the

use of paper with greater use of Internet technology and IT.

The entries for *ELCINA-EFY Awards 2010* will soon be invited and the entire process including formation of award committees, receiving and scrutiny of entries followed by evaluation will be completed by August-end. The awards distribution ceremony will be held in September this year.

Forum to encourage unified communications interoperability

Microsoft, Polycom, Hewlett-Packard and nine others have joined hands to form the Unified Communications Interoperability Forum (UCIF). The forum aims at enabling users to smoothly shift from one mode of communication to another and to combine the various modes in one session depending on which tools each participant has.

Unified communications is the combination of voice, video and text for collaboration among people in one enterprise or among different organisations. Because it typically involves a variety of systems, often from different vendors, UC can be hard to pull off in the real world.

UCIF aims at making most UC products work together smoothly, so users can, for example, easily turn a text-messaging conversation into a desktop videoconference and bring other users with immersive telepresence rooms into that same video session.

Samsung to focus on green energy

As part of its 2020 growth strategy, Samsung plans to invest around \$21 billion in businesses including health care and green energy technology. The company will focus on areas like solar cells, rechargeable cells for hybrid electric cars, light-emitting diodes (LED), biopharmaceuticals and medical devices. The move is being viewed as a plan to outdo its rivals, such as General Electric, Philips Electronics and Sanyo Electric.
