

tion, and then hold your phone up to a scanner at any location that accepts contactless Visa payments.

The payWave system uses a wireless communication technology called

near-field communication (NFC) that is considered more secure than RF and has a shorter broadcast range. DeviceFidelity says that its In2Pay microSD cards also use an anti-sniffing security feature that disables the SD card's transmission abilities when it is not in use, to prevent unauthorised access of your credit card information.

Technology to detect pirated video

NEC has developed a video content identification technology that detects illegal copies of video content uploaded to the Internet in a matter of seconds. This technology generates a fingerprint (video signature) to identify video content, and then compares video signatures with the signatures of original content in order to detect

copies or altered versions. Therefore altered video content, such as caption overlays, camera captured copies and analogue copies, can be quickly and accurately detected.

The technology enables content holders and service providers to automatically detect illegal copies and prevent illegal upload of video content on the Internet by registering original video content. These developments are expected to significantly reduce the time and cost of manual content inspections as well as improve the scale and accuracy of content assessment.

New design tool reduces power consumption by up to 30 per cent

Xilinx has introduced the ISE Design Suite 12 software that uses an intelligent clock-gating technology to reduce dynamic power consumption by as much as 30 per cent. The design tool also provides advances in timing-driven design preservation, AMBA 4 AXI4-compliant IP support for plug-and-play design, and an intuitive design flow with fourth-generation partial reconfiguration capabilities that lowers system cost for a broad range of high-performance applications.

With full production support for all Xilinx Virtex-6 and Spartan-6 FPGA families, the ISE 12 release is claimed to

be the industry's only domain-specific design suite with interoperable design flows and tool configurations for logic, digital signal processing (DSP), embedded processing, and system-level design.

New Atom processors

Intel has unveiled a new Atom processor-based platform (formerly 'Moorestown') that consumes significantly less power, preparing the company to target a range of computing devices, including high-end smartphones, tablets and other mobile handheld products. The chips bring Intel's classic product strengths—outstanding performance to run a comprehensive and growing number of rich media and Internet applications, a choice of software and the ability to easily multitask—across a number of applications, including HD video and multi-point videoconferencing.

The Atom processor Z6xx combines the 45nm Intel Atom processor core with 3-D graphics, video encode and decode, as well as memory and display controllers into a single SoC design. The MP20 platform controller hub supports a range of system-level functions and I/O blocks. Additionally, a dedicated mixed-signal IC integrates power delivery and battery charging, and consolidates a range of analogue and digital components.

3rd Largest UPS Manufacturer of India

climbing from the 10th to the 3rd position in just 5 years*

► Full Range of UPS Systems

► Wide Customer Base

► All India Sales & Service Network

Uniline Energy Systems (Pvt) Ltd, Uniline House, Ramesh Market, East of Kailash, New Delhi - 110 065. Tel. : - 011 - 4666 1111, 2646 9031, 2646 9108
Chandigarh : 9267 63793 Chennai : 99400 49677, 98841 42866, Dehradun : 98972 72449 Jaipur : 98290 60772 Kanpur : 94151 32093, 93368 55700 Kolkata : 94330 33855, 98833 59262

D SERIES

High Power IGBT UPS Upto 1800 KVA

GIGALINE

IGBT UPS Upto 200 KVA

MAXILINE

IGBT UPS Upto 100 KVA

GREENLINE

Online UPS Upto 6 KVA

SMARTLINE

Offline UPS Upto 3 KVA

POWERLINE

CVT - SERVO Upto 1000 KVA
