

Chroma ATE's EnergyStar-certified 66202 digital power meter

and forward current. They use source-measure units to provide excitation voltage or current, and measure voltage and current in components.

Apart from enabling the design of green electronics, T&M equipment themselves are becoming green of late. For example, some companies such as Chroma ATE have found ways to recycle energy from tests that involve charging and discharging of batteries. The energy released by discharging batteries is fed back into the system's direct current (DC) power grid. The testers also use DC-DC converters instead of power metal-oxide-semiconductor field-effect transistors (MOSFETs) to reduce the power consumption from 12W to less than 4W.

Machine vision: Powered by X-rays, LEDs and 3-D

X-ray vision has been used in T&M equipment for a while now. However,

Adtron PC-based DSO

Oscilloscopes have traditionally been bench-top equipment. But recent developments in personal computers have benefited many, even the T&M equipment. Adtron Technologies' PC-based digital storage oscilloscope (DSO), PC040, is a high-performance, wide-bandwidth (40MHz) oscilloscope with low power consumption. While being very competitively priced, it is USB 2.0 compatible, requires no external power supply (as it is bus powered by USB) and is extremely convenient to use. Compact size makes it ideal for field technicians for calibration and troubleshooting on the site.

The equipment is designed using digital signal processing algorithms that provide accurate data record and various data format processing. The PC-based feature enables you to save output waveform and signal values in MS Word or Excel or graphic files—helpful for future analysis and sharing. (For details, visit www.adtronindia.com)

Agilent 32GHz Real-time Scope

The Infiniium 90000 X-Series oscilloscope is claimed to be the world's fastest real-time oscilloscope by Agilent Technologies. It features 32GHz real-time/true analogue bandwidth, and is said to offer breakthrough performance with the industry's lowest noise floor and lowest jitter. As the data rates extend beyond 10 Gbps, the high-bandwidth oscilloscope will help engineers to capture fast, single-shot events and make critical measurements like jitter while ensuring compliance to industry standards for interoperability.

The design of Infiniium 90000 X-series is based on a proprietary indium phosphide (InP) integrated circuit process to enable high-frequency capability. Custom aluminium nitride packing technology combines five InP chips in the front-end multi-chip module that incorporates unique noise shielding and heat dissipation techniques. (For details, visit www.home.agilent.com/upload/cm_upload/AII/clp_ID.1877137_eng.html)

Wide portfolio, broad spectrum – your partner in T&M

Audio analyzers

Universal instruments flexibly configurable for measurements on analog and digital interfaces

Signal generators

Covering all instrument classes for digital, analog, baseband, RF and microwave applications

Signal and spectrum analyzers

Largest product portfolio on the market from handheld to mid-range to the fastest and most exacting analyzers available
