

Creating engineering leaders of tomorrow...

Altium recognizes the importance of working with designers of the future and we are committed to providing accessible design tools that can be tailored in a package to suit your academic needs.

Streamline the entire electronics design process within a single unified solution.

- > Smooth path from concept exploration and rapid prototyping through real-time 3D PCB design as included in the education curriculum.
- > Rapid prototyping using a live, interactive, reconfigurable hardware development platform.
- > Use the NanoBoard as a system prototyping and development platform, as an educational hands-on teaching tool, or as a complete test bed for FPGA-based embedded system design. Its power, flexibility and tight integration with Altium Designer open up the exciting possibilities of soft system design to you today.

Altium - creating engineering leaders of tomorrow. Altium Designer and the NanoBoard NB2 are used by many premium Institutes & Universities in India.
