

Educational & Hobby Kits

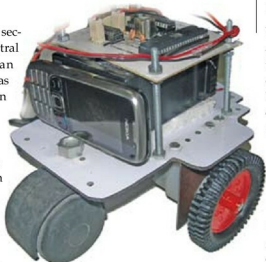

Industry Benefits from Technical Awareness

Practical learning through educational kits is just what the budding engineers need to solve the real-world problems. And now that colleges have started realising the potential of hands-on training, educational and hobby kits providers see busy years ahead

■ SUDESHNA DAS

The fast growing education sector in India for which central government envisages an outlay of about Rs 2.7 trillion (as per a report by Ministry of Human Resource Development) during 11th five-year plan period (2007-12) holds immense business opportunity for the educational kits providers. The thrust on hands-on experience of engineering aspirants reinforces the sizeable need for educational kits. The sales of hobby kits in India are already going up and, in fact, these are a craze amongst budding engineers as

“In India, this market completely depends upon educational institutes like engineering colleges, polytechnics, science colleges, IITs, NITs and postgraduates colleges.”
—Pravin Raut, managing director, SINCOM

well as electronics hobbyists.

Pravin Raut, managing director, SINCOM, informs, “In India, sales of educational and hobby kits are driven by educational institutes like engineering colleges, polytechnics, science colleges, IITs, NITs and postgraduate colleges.”

Market size

While it is not easy to quantify the exact size of the educational kits industry, the vast education market indicates the opportunity that awaits this industry. Educational institutes require latest electronic products and concurrent technologies to develop future manpower for the nation.

“India is today one of the largest higher-education networks in the world. Quite a large number of engineering colleges have been set up, realising that India has to become a great industrial country, and would require a far larger number of engineers. This has resulted in an exponential
