capacity is a minimum of 1 GB. This is sufficient to run Internet applications, media and also small productivity tools. Most netbooks come with 1GB RAM. Through the memory slot, these can support another 1 GB. So you get a total of 2 GB. For instance, the Dell Mini10 comes with 1GB RAM by default, which is upgradeable to 2 GB.

Storage. For an external hard drive, you can choose between 160 GB, 250 GB and 320 GB. An average netbook user needs at least 160GB HDD to store his data. Media-intensive work may require 250 GB or even 320 GB.

160GB hard drive is selling the most because it's cheaper and generally sufficient for the tasks that a netbook is required to perform. If you opt for 250 GB rather than 160 GB, you'll have to pay about Rs 1000 extra.

HP offers a cloud drive option – an imaginary hard drive space – with which you won't need an external drive. It lets you store your files, photos, etc in a storage space in the Internet. Whenever you are online, you have access to all that stored data.

Screen size and type. The choice of screen size and type depends on the usage pattern and accessibility feature requirements. Cost is another concern. 25.9cm (10.2-inch) screen is today standard on most of the netbooks in India. Netbooks, though, are also available in 29.5cm (11.6-inch) and 30.5cm (12-inch) sizes.

Of all the netbooks sold, those having 25.9cm screen account for as much as 90 per cent share. That may be the reason why you may not find netbooks having other screen sizes in most of the electronics stores.

Some users may need a 30.5cm screen in order to get a bigger viewing window for e-mail and productivity tools. Dell offers both screen sizes with the Inspiron Mini brand.

Also important is the kind of screen. There is not much of a choice in resolution. 25.9cm screens come with 1024×600 pixels, while 30.5cm or 29.5cm high definition (HD) have a resolution of 1366×768 pixels and can
