

K-3D (Animation, 53.6 MB)

This is a free software for 3D modeling and animation. The software is distributed under the GNU GPL licence and is easy-to-use. The look and feel of the software is similar to Windows, hence getting accustomed to it will not be an issue. Further, the software features object-oriented plug-in architecture and can be used to generate motion-picture-quality animation. It gives the designers the option to view the object created from various angles—pan, tilt, zoom, dolly, modeling and tripod modes. The geometry formats that it supports are wavefront OBJ and GTS. JPEG,

PNG and TIFF are some of the image formats that K-3D supports. K-3D site offers video tutorials to the users, thus making the learning graph easy and fast.

**Vim** (Utilities, 8.53 MB)

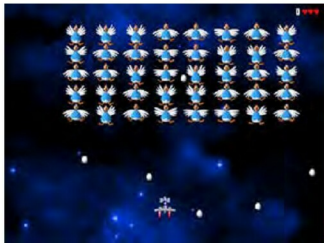

Those who have used UNIX or Linux must have used the vi editor. But there exists a better vi text editor called 'Vim.'

It stands for 'Vimproved,' which is an open source software that runs under the GNU/GPL licence. Vim should not be confused with a word-processor, although it has the feature to display text with various forms and highlighting; it also does not support WYSIWYG.

Another notable feature of vim is the power of editing the text using commands. Commands such as sed, grep and awk can be used along with vim to search, edit or display selected part of the text. The minimum system requirement for this software is a Windows machine with 166MHz CPU and 32MB RAM.

**PuTTY** (Utilities, 1.67 MB)

PuTTY is an open-source, cross-platform software developed by Simon Tatham. It is a client program for remote login network protocols, SSH and Telnet. These protocols are used to run a remote session on a computer, over a network. The PuTTY software is written in 'C' language and the latest stable version of the software available is 0.60. It comes with an SCP client, which is used for command-line secure copy. It also allows general-purpose file transfer through PSFTP, has a command-line interface to the PuTTY back-ends through Plink, and an RSA and DSA key generation utility. In other words, using the PuTTY software you can login into a UNIX machine from a Windows machine and access all the contents in it or share files and execute commands. The minimum system requirement for PuTTY is Windows 9x through Windows 7.
