Colourful USB Flash drive

KINGMAX has launched a Pop series USB Flash drive—KD-01. Available in four different choices of colourful caps and black waistline-shaped body, KD-01 is easy to use and bright in colour. The storage capacity is 2-16 GB with USB2.0 fast data-transfer rate.

COMPONENTS

Low-noise, high-speed operational amplifier

Analog Devices, Inc. (ADI) has introduced the dual version of its ADA4898-1 operational amplifier (op-amp). Like the ADA4898-1, the ADA4898-2 dual-channel, high-speed op-amp offers designers a unique blend of low distortion, ultra-low noise and high speed for applications that require high-precision signal processing, such as radar-based collision avoidance systems in cars, medical instrumentation, process control and industrial automation and other precision instrumentation applications. The dual-channel version reduces the size of the packaging while maintaining performance.

Step-down DC-DC controller

Linear Technology has introduced a dual-output synchronous step-down DC-DC controller with multiphase operation, differential output voltage sensing and high-frequency operation.

The LTC3860 works in conjunction with external power train devices such as power plocks and DrMOS, as well as discrete n-channel MOSFETs and associated gate drivers, enabling flexible design configurations. Up to twelve phases can be paralleled and clocked

out-of-phase to minimise input and output filtering for very high-current requirements (up to 300A). Applications include high-current power distribution and industrial systems, and DSP and ASIC supplies.

Ultrasound pulse controller

STMicroelectronics has introduced a highly integrated low-noise ultrasound pulse controller that uses ST's advanced high-voltage BCD mixed-signal technology.

The STHV748 provides four independent channels, each of which generates precisely controlled high-voltage pulses to drive piezoelectric crystals or other transducers. The device enables the next generation of high-performance ultrasound imaging systems in a small form factor. The ultrasound scanner works on the same principles as radar. The product can provide accurately timed high-voltage pulses that generate the ultrasound burst and switch to receive mode to detect the echoed signals.

Multicore SoCs

Texas Instruments is introducing a family of products based on multicore DSPs. These operate at 1.2GHz clock frequency and support fixed- as well as floating-point processing within each DSP core.

MISCELLANEOUS

Energy-efficient LED lighting

Schneider Electric has launched a highly energy-efficient LED-based lighting system, to provide lighting to people living with no or unreliable electricity in India. Called Ind-Diya, the system

operates off mains supply and/or solar power and provides backup for eight to 15 hours for indoor applications.

Ind-Diya is available in nine different variants. The basic model with 45 LEDs is available for Rs 550. It is powered

by an external chargeable battery.

The high-end variant is a 90-LED solar lighting system that is compatible with the electrical grid and is priced at Rs 4500.

Ind-Diya consumes 50 per cent less power than an 11W CFL and 90 per cent less power than a 60W incandescent lamp for the same light output. It can be mounted on wall and illuminate a room of 3.6x3.6m² for all normal activities.

The system provides 50,000 hours of lighting.

Car power adaptor

Belkin has come up with a 200W charger that when plugged into your vehicle's cigarette lighter socket will convert your vehicle's battery power into common household current. The Belkin's AC Anywhere charger can easily charge more than one device at a time. Moreover, it features a convenient on/off switch with power indication and fuse protection along with an audible alarm that sounds if the vehicle battery voltage drops to the danger level. This one unit can charge your mobile phones, iPod/iPhone, laptop, camera or any other device you would travel with.
