

Professional Ubuntu Mobile Development

The recent versions of open source operating system Ubuntu Linux are aimed at manufacturers who build Internet-ready handheld devices based on both the Atom and ARMEL processors. This book provides open source software developers with the tools and techniques for customising a mobile Internet device, and offers step-by-step tutorials to some common tasks.

The book starts with an overview of the Mobile Linux landscape and then proceeds to setting up, developing, packaging and building a distribution for a mobile device. With it, you'll learn to choose the right applications for a mobile device, develop applications, prepare the applications for distribution, fine-tune the kernel, customise and build your own distribution, and test for standards of stability and performance.

Cyber Laws

The Information Technology (Amendment) Bill, 2006 was modified and passed by the Parliament in Dec. 2008. It was notified after the assent of the President as the Information Technology Amendment Act, 2008. This revised edition of the book takes into account the 2008 amendments.

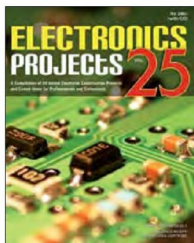

There is debate regarding the law for patentability of computer software. This edition takes into account the latest decisions in 'In re Bilski' and 'In re Astron Clinica Ltd' cases. It also presents the decisions in 'Jacobsen vs Matthew Katzer' (which holds the violation of conditions

of open source software to be infringement of copyright) and 'In re French Strike Law' (which holds the Internet to be part of freedom of expression). The new cases in domain name disputes and other areas have been discussed. Rules, regulations and guidelines contained in Part 2 of the Act have also been updated.

Electronics Projects Vol. 25

Published by: EFY Enterprises Pvt Ltd, D-87/1, Okhla Industrial Area, Phase 1, New Delhi 110020
Pages: 197
Price: Rs 200 (with CD)

This volume of *Electronics Projects* is a compilation of 23 construction projects and 66 circuit ideas published in 'Electronics For You' magazine during 2004. It provides all classes of electronics enthusiasts—be they students, teachers, hobbyists or professionals—with a valuable resource of electronic circuits that can be fabricated using readily-available and reasonably-priced components.

The CD included with the volume not only contains the datasheets of major components used in construction projects but also the software source code and related files of various projects. This will enable the readers to copy these files directly onto their PC and compile/run the program as necessary, without having to

prepare them again using the keyboard. In addition, the CD carries useful software, tutorials and other goodies.

All modifications, corrections and additions sent by the readers and authors have been incorporated in the articles. Queries from readers along with the replies from authors/EFY have also been published towards the end of concerned articles.

Some of projects included are lift overload preventer, bidirectional visitor counter, remote-controlled electronic code lock, voice recording and playback, microprocessor-based home security system, ultrasonic lamp brightness controller, LED-based message display, DC motor speed controller, programmable timer for appliances and electronic watchdog.
