

What is the life-span of a power saver?

The lifespan of power savers depends on the life of PFC capacitors (measured in the number of burning hours) used. PFC capacitors are manufactured by Siemens, ABB, GE, etc. From their datasheets, we found that the life of a capacitor is 6-8 years. Some capacitors come with even higher burning hour ratings.

What are the other benefits?

Power savers reduce the heating loss in appliances. This helps in improving their life. Also, the lower value of current harmonics improves the quality of signal. This reduces the carbon emission on the power generation side. Thus, it is beneficial for the utility company providing electrical supply. For 1 kW of power, 11 kg of carbon is emitted.

How much do these devices cost?

The range is wide – from Rs 400 to

Rs 1600. This cost is not dependent on additional features or higher savings. Rather, it is based on the capacity of the devices and varies from one brand to another.

Tips on buying a good power saver?

Power savers have been much hyped through SMS marketing and telemarketing. Here are a few buying tips:

1. If you have very few inductive appliances in your house, power saver may not be the option for you.

2. Buy the power saver only from a reputed company.

3. Seek existing customers' testimonials/comments.

4. Go for a power saver that comes with guarantee period exceeding 30 days, as you cannot judge its benefits in less than 30 days.

5. Try buying from a seller who offers money-back guarantee, as there are duplicates with just an LED circuit available in the market.

6. If you have a small office and a three-phase supply, the power saver may be effective.

Where from can I buy a power saver?

Visit 'www.eleb2b.com' and select the section for domestic power saver manufacturers. You will get the list of all the manufacturers along with their contact details. ●
