Multispindle bobbin-winding machine

The Max-4-100 multispindle, linear bobbin-winding machine from Electromech covers a wide range of wire diameter and product spectrum. It can be equipped with automatic bobbin loading and unloading mechanism to increase the productivity and reduce operator fatigue. Independent axis modules contribute

axis rigidity and highly accurate process repeatability. Twin slab construction facilitates flexible spindle configuration. The number of spindles can be expanded up to twelve, which results in high-volume production and low cost of ownership.

The quick changeover from type to type helps to cover a wide range of applications like relay coils, solenoid coils, ignition coils, inverter transformers, injector coils and pickup coils.

Remote alarm modem for PLCs

Ambetronics Engineers has introduced Tixi alarm modems with 32-bit power CPU, large data memory, future-oriented XML database architecture and Internet technology. The modems connect directly to virtually any large or small programmable logic controller (PLC), allowing for a simple and affordable remote maintenance solution

for industrial applications. These can communicate with any PLC.

The protocols of leading PLC manufacturers are already installed. This enables the modem to read and write PLC variables and ports directly, without having to load a special driver or function block into the PLC. A Tixi modem can be used to handle the remote maintenance of several controllers via a telephone line or the Internet.

Repair-and-troubleshoot tool kit

The 15-019 series of basic electronic tool kit from Aven Inc., USA, contains the essential tools needed to access, troubleshoot and repair electronic

equipment. The kit contains an alignment driver, cutter, desoldering pump, two-piece round and flat needle file set, nut drivers, solder, 30-watt ceramic soldering iron, solder wick, PVC-insulated tape, stainless tweezer, adjustable wrench, pliers, screwdrivers, etc.

TEST & MEASUREMENT

25MHz DSO

If you are looking for value for money, check out the new 25MHz colour digital storage oscilloscope (DSO) with FFT analysis and sampling rate of 250

MS/s. The 14.5cm (5.7-inch) colour LCD gives 320×240 resolution.

This dual-channel DSO can perform 28 automatic measurements

with parameter value displayed on the screen with memory for saving ten waveforms and ten setup parameters.

The DSO-025C2 comes with a USB port interface as well as USB storage facility.

Power-quality analysers

Tinsley has introduced state-of-the-art power-quality analysers in single-phase, three-phase, four-channel and multi-channel versions. These analysers are suitable for non-gapping power measurement/analysis.

Various units are available for precision measurement and analysis of power, energy, Trms values, harmonics, flicker, transients, etc with frequency of DC to 10 MHz, sampling rate of up to 3 MSa/s, basic accuracy of up to 0.03 per cent, ranges of up to 1000V/32A, PC interface, built-in memory storage, USB interface/floppy drive, process signal interface and graphical display.
