

Logic protocol analyser test solution for PCI Express 3.0

Tektronix, Inc. has introduced a comprehensive test solution for PCI Express 3.0—the next-generation PCIe specification—spanning protocol to physical analysis in a single tool. The TLA7SA16 and TLA7SA08 logic protocol analyser modules, bus support software and probes combine to give PCIe 3.0 developers an exclusive time-correlated view of system behaviour, starting with protocol analysis and working down to the physical layer to debug the root cause of elusive problems.

The analyser delivers the best of both a protocol analyser and a logic analyser for PCIe design, test and debug. Protocol analyser capabilities include flexible, integrated data views for analysing and displaying protocol traffic flow correlated with physical layer events. Logic analyser capabilities include a wide range of probing options, sophisticated triggering and time-correlated waveform and disassembled listing data displays of raw symbols and lane data.

Powerline transducers

Meco-G has introduced highly reliable, accurate powerline transducers that convert a sinusoidal AC/DC signal into a standard DC signal. The output is linearly proportional to the

measured input signal. These transducers have accuracy class of 0.5 as standard feature.

The transducers are available for current, voltage, frequency, watt, VAR and DC-isolation. These are highly stable and give output signals like 4-20mA DC, 0-10V DC. They operate off 110V/230V AC and 24V/48V DC, and are available in a flame-retardant case

with DIN-rail/wall mounting.

The transducers are suitable for process control, telemetering, data loggers, PLCs and SCADA systems.

POWER SUPPLY

VRLA battery for home UPS

Exide Industries, in collaboration with Shin-Kobe Electric Machinery Co., a Hitachi group company, has designed the INVASAFE range of sealed maintenance-free VRLA batteries for reliability-oriented critical applications. The batteries take care of many of the failure modes and are reliable and eco-friendly.

The batteries are built with an antimony-free lead-calcium alloy us-

ing a suitable dosage of tin, so these perform much better so far as water retention is concerned. A very thick absorptive glass mat (AGM) separator with electrolyte in hybrid gel form provides enhanced electrolyte storage between each positive and negative electrode pair. As a result, the batteries use the maximum per-Ah electrolyte. The thicker separation also inhibits any separator puncture, thus reducing the possibility of failure through internal shorts developed during the long float life.

High-power IGBT online UPS

Uniline has introduced high-capacity, high-power D Series UPS systems with a single system capacity of up to

300 kVA.

Using a high-frequency IGBT rectifier stage and high-frequency PWM IGBT technology at the inverter stage, the D Series UPS systems have input power factor above 0.99. The high input power factor saves 25 per cent of electricity bill compared to a conventional UPS system. The UPS systems provide power backup for up to eight hours. Designed as per

the Indian environmental conditions, these can work at 50°C. The isolation transformer in them can take care of all the input power problems such as spikes, leakages and neutral break.

LIGHTING

PowerLED lights

Binay has developed PowerLED MR-16 lamp that matches the light output of up to 50W halogen lamps, while still providing 80 per cent power saving and a working lifetime of over 50,000 hours (as against only 1000-2000 hours of the conventional halogen lamp).

Initially designed for the hotel industry, these lights have the same colour, beam pattern and light output as standard halogen MR-16 lamps.

The lamps are available in 5W, 10W and 30W models.
