Memory line for high-end servers and workstations

Kingston Technology has added to its ValueRAM server memories the Premier product line. The new memory products are made specifically for mission-critical server systems that require maximum uptime and reliability.

For memory-intensive systems such as medical equipment, database servers, high-performance computers, networking products, retail kiosks, storage systems or video-on-demand servers, the ValueRAM Server Premier has additional levels of control to ensure product consistency on each and every order, including fully controlled materials.

COMPONENTS

Over-voltage protection controller

Linear Technology Corporation has introduced a 2.5V-5.5V over-voltage and over-current protection controller that safeguards low-voltage, portable electronic devices from damaging input voltage transients and current surges.

Over-voltage events can occur due to power adaptor failure or faults, or when hot-plugging an AC adaptor into the power input of the device. The wrong power adaptor can also inadvertently be plugged into a device, potentially causing damage from over-voltage or negative supply voltage.

The LTC4361 utilises a 2 per cent accurate 5.8V over-voltage threshold to detect an over-voltage event and responds quickly within 1 μ s (max.) to isolate the downstream components from the input.

High-performance 8-bit microcontrollers

Fujitsu Microelectronics Asia Pte Ltd (FMAL) has developed three new series in its F2MC-8FX family of high-performance 8-bit microcontrollers with embedded flash memory. The products operate off just 1.8V of power, and will be available in sample quantities from early May.

The products include six models with embedded LCD controllers in the 64-pin MB95370L series, six models in the 80-pin MB95310L series, and six with an FC interface that has up to two channels in the 24-pin MB95350L series. These meet the demand for microcontrollers with low-cost LCD controllers.

Controller ICs for AC-DC adaptors

On Semiconductor has introduced NCP1237, NCP1238 and NCP1288 fixed-frequency current-mode controller ICs for AC-DC adaptors used with

laptops, notebook computers, LCDs, printers and consumer electronics devices.

The controllers are available in various frequency options with single- or dual-level over-current thresholds. The standard device has a built-in 65kHz oscillator.
