

MEMORY CARDS FOR YOU

Memory cards are available at IT hardware shops, mobile shops and even nearby stationery shops. Most of us don't bother much about the legitimacy of the source or the originality of the card. But 'how to' and 'where to' buy the card is very important, for you are going to store your efforts of several months on it

■ UMA BANSAL

Memory cards have become almost an essential purchase, with so many compatible devices making use of them as additional storage or for operation. Cellphones and cameras are the biggest users of memory cards, though memory cards can also be used in MP3 players, digital photo frames, etc.

Buying a memory card looks easy, but given the wide variety available, it's good to know about them before

hand. Here's the way to go!

What are the options?

In India, memory cards are available from many companies, including Transcend, SanDisk, Kingston, Sony, Amkette, Moser Baer, Verbatim and Kobian. SanDisk has been an innovator. It pioneered CompactFlash card in 1998, SD cards in 1999 under a joint venture with Toshiba and Matsushita and co-developed Memory Stick with Sony. It also came up with the first Gigabyte CompactFlash card, first 4GB CompactFlash card and the smallest

removable flash card for mobile segment.

There are a variety of memory cards, including Secure Digital (SD), CompactFlash, Multimedia cards (MMCs), Memory Stick PRO Duo and M2. Memory Stick PRO Duo, Memory Stick Micro (M2), SD and microSD are the most common. Memory Stick Pro Duo and SD are bigger cards, while M2 and microSD are the smaller variety.

The three formats that are used in most digital cameras are SD (most common), Memory Stick (for Sony cameras) and CompactFlash.
