apixels (MP), use a standard SD card with 4-5MB/s transfer rate. For 8 MP and above cameras, buy a card having 30MB/s speed. For professional SLR cameras, use a 60MB/s card if you will not shoot video and a 90MB/s card if you'll shoot video. SanDisk's 64GB card with 90MB/s transfer rate, the Extreme Pro, is meant for high-end professional cameras with video. That means it can record HD video.

There is another card category for video cameras. Any video camera user should buy a Class-4 and above card. Video cards are specially meant for video photographers. These are available in HD variant too.

Unlike flash drives, memory cards have a very large grey market because these are very easy to put the logo on. So ensure that you are purchasing your memory card from a legitimate source. The pirated cards look identical but their lifespan and reliability are far below the original cards provided by legitimate manufacturers.

Within the fake market, one is the illegal-logo type and the other is the illegal-capacity type. Gaffar market in Karol, Delhi, is the centre of this kind of activity. There if you buy a card with a certain company name, there is no guarantee that it's made by the same company. That means the card may or may not work. Then, if it is mentioned as 4 GB, the actual capacity may be 256 MB only. The vendor may also manipulate the controller in such a way that when you insert the card in the computer, the operating system shows 4 GB but the actual capacity is 1 GB only. So 'how and where to buy the card' is very important.

In Palika Bazaar area of Delhi, you can get a 4GB SDHC Class-2 card for Rs 500 and a 16GB SDHC Class 2 card for Rs 1700. microSD cards will cost you Rs 300 for 2 GB, Rs 490 for 4 GB and Rs 950 for 8 GB.

But don't be fooled. For a less price, you can be taken for a ride. These cards are sold without bill. Your efforts of several months to store songs
