

When the EFY Billbook.htm program is run under Internet Explorer, it prompts you to enter the number of rows that you need to fill in the bill. That is, if you want ten items to fill in the bill, you have to enter '10' under 'Enter number of rows' message box. A sample program output for two items is shown in Screenshot 1.

The program automatically calcu-

lates the VAT, sub-total and grand total and then displays them in the last column of the table.

Once the input cells are filled, click 'Save...' button (refer screenshot 2). The program then prompts you to enter a valid path on the hard disk where this file has to be saved. Enter a file name along with valid path, say, C:\Receipt.htm, and then click 'ok.' Once

the Receipt.htm file is saved successfully, close the EFY Billbook.htm file. Now open the Receipt.htm file. The program again prompts you for the number of rows, so that you can enter new items in the previously saved bill. Here, you can find the previously saved details just below the current blank form (refer screenshot 3). You can even delete the previously saved file or add new items to this file. The program automatically increments the bill number, date and time for the new bill.

The total amount in words gets activated only by using Tab key (not mouse) between the cells/columns. The amount is automatically calculated and shown in the appropriate column. Check the box against 'VAT' using mouse.

While saving the file, you should enter a valid path on your system. In case of any error, provide your own path by changing the path in 'C:\receipt.htm' defined under the HDD() function. As this program uses cookies to display the receipt number, delete all the cookies that were present in the system. If cookies are important, save this file to any other disk partition.

The data so saved remains permanently on the hard disk as any other file would. For this, we have used a JavaScript ActiveXObject. This particular plug-in (present in all browsers) can directly mingle with window components. When the program is saved, it creates a text file, copies each and every parameter, then makes an exact replica of the main program.

EFY note. The source code is included in this month's EFY-CD and is also available on www.efymag.com website.

Code No.	Description	Quantity	Price	Total
1.	Electronics For You. Electronics Subscriptions	1	135	135.00
2.	Electronics For You. Electronics Subscriptions	1	205	205.00
3.	Electronics For You. CD case Subscriptions	1	360	360.00
Subtotal				340.00
VAT @ 4%				9.00
Grand Total				349
