INVENTING NEW TECHNIQUES OF PRODUCING LIGHT

cause blemishes, say doctors. According to a recent research conducted by Swedish researchers, this habit or practice may lead to 'toasted skin syndrome'—a mottled or sponge-patterned skin colouration condition caused due to the heat generated by the laptop, which may at times shoot up to a temperature of 52°C.

The condition was linked to laptop use by the researchers in an article published in the October issue of *Pediatrics*. In a case cited by the journal, a 12-year-old boy developed sponge-patterned skin colouration on his left thigh after playing video games with the computer on his lap for a few hours a day for several months.

According to the Swiss researchers, Dr Andrea Arnold and Dr Peter Itin, though laptops rarely get hot enough to burn their operators, these can cause skin damage that might lead to cancer.

Table tennis bat for Wii players

Shinobii Technologies, a UK-based video game peripherals manufacturer and designer, has introduced a high-tech table tennis bat that offers Wii table tennis players the opportunity to wield a table tennis bat that's a true 1:1 replica of an actual table tennis paddle in both size and weight. But it's the smart technology inside that's the real game changer, says Shinobii.

"Part of the strategy of beating your opponent in this high-speed action game is learning precise bat control," according to Andy Mitchell, sales manager at Shinobii Technologies. "And the feeling of grabbing a handful of air every time you swing the remote is counter-productive to developing that strategy," Mitchell added.

When players wrap their hands around the company's table tennis bat, they think they are holding an actual paddle. Not only that, all of the electronics required to interact with the Wii console are built into it. This means players don't have to slip the standard Wii remote into the handle as they do with other sports equipment for Wii.

The bat has a built-in remote that eliminates the need to use the traditional Wii remote and is compatible with all Wii Motion Plus games. It contains the technology to translate
