Tabor's WaveXciter Series High-Speed Arbitrary Waveform Generators

- 2.1Gs/s, 12 bit single or dual channel waveform generators
- Separates or synchronized channels with 10 ps resolution
- 1GHz sine and 500MHz square waves
- 16M waveform memory, 32m optional
- Up to 4Vp-p DC-Couple or ± 5 dBm AC-Coupled output paths
- Extensive modulation capabilities
- Smart trigger enables trigger hold-off, detect, wait, abort and restart
- Advanced sequencer for step, loop, nest and jumps scenarios
- Build-in fast dynamic segments and sequences hop control
- Two programmable markers (positions, width and levels)
- Two instrument synchronization to form 4-channel system
- Disk-on-key store or recall and internal 4GB flash memory
- 4" User friendly display and remote LAN, USB and GPIB interfaces

T
TABOR ELECTRONICS Ltd.
Since 1971

Tabor's all-new WaveXciter series offers unrivaled performance, even when compared to instruments designed to generate fewer types of signals or higher sampling rates. The WaveXciter can generate literally any waveform, at frequencies up to 1GHz with 8 digits of resolution and 1 point granularity, resulting in the highest precision signal creation and regeneration. Aside from its natural ability to generate arbitrary waveforms, the WaveXciter can also be used as a full-featured standard, modulation or pulse generator to solve various applications. Its affordable footprint saves space and cost without compromising bandwidth and signal integrity.
