

New Products

COMMUNICATIONS

Cordless phones

Gigaset Communications has launched two new cordless phones with an integrated answering machine.

The A490 comes with an illuminated keypad and display and an integrated phonebook with space for up to 80 entries. The call list stores the last ten numbers for redialing and up

to 25 missed calls. If a caller's contact data has been stored in the phonebook and the CLIP function is enabled, the display shows the caller's name. The A490 is priced at Rs 1990.

The integrated answering machine of the A495 can record up to twelve minutes of messages and has an added benefit of recording the dates and time of the messages and announcing them. The A495 is priced at Rs 2490.

SECURITY

Portable metal detector

Subtronics has launched a door-frame metal detector, the DFMD-05, for use where a high level of security is needed.

The metal detector produces an audio-visual alarm if the person passing through is carrying any metallic

(ferrous and non-ferrous) object. Its bar-graph display allows the viewer to judge the volume of metal carried, and even the audio tone varies according to the mass of metal. It has user-selectable sensitivity levels ranging from 0 to 9. Three additional LEDs help in determining the level of metal carried in terms of low, medium and high. The battery backup system allows the metal detector to operate for five hours even after the mains fail.

TEST & MEASUREMENT

Mid-range logic analyser

Higher signal speeds and increased board densities often lead to signal integrity issues such as crosstalk, ground bounce and ringing that manifest themselves in functional failures of the digital system. The TLA6000 Series logic analyser from Tektronix gives embedded system engineers a complete toolset to help them quickly find, isolate and debug these hard-to-

isolate issues.

Intended to meet the growing demand for more performance among embedded engineers, the TLA6000 series is available in 68, 102, and 136

digital channel configurations with 125ps high-speed timing on all channels, up to 450MHz state timing and up to 128Mb record length.

PXI Express data acquisition module

National Instruments has announced the latest in its SC Express family of high-performance data acquisition (DAQ) modules with built-in signal conditioning. The NI PXIe-4331 DAQ device is a simultaneous high-speed bridge input module that provides signal conditioning for dynamic measurements from strain, pressure, torque and load sensors. It increases the speed of bridge-based measurements and, with PXI Express, provides 250 MB/s of dedicated bandwidth per device to give engineers the freedom to increase channel count without compromising sampling rates or data throughput.

The PXIe-4331 features eight channels with 24-bit analogue-to-digital converters (ADCs) per channel and 102.4 kS/s per channel sampling rate. To improve accuracy and reject noise, it offers anti-aliasing and digital filters per channel.
