Three-phase power analyser

Instruments & Machinery Sales Corporation has introduced a light-weight and portable power analyser. The 3P4W is easy to use with pushbutton operation and a 10-display LCD screen. It is capable of true RMS sensing, and can measure power kW, kVAR and kVA, PF, θ , Hz, and energy kWh, kVARh and kVAh. Other features include phase sequence indication, backlight display, manual data memory and read (99 sets), data logging (up to 512kB memory, 20000 sets), and RS-232C optical interface with three-phase voltage/current waveform display and harmonic analysis.

Digital thickness meter

AVS Electronics has launched a microprocessor-based thickness meter for measuring the thickness of steel,

cast iron, aluminium, red copper, brass, zinc, quartz glass, polyethylene, PVC, grey cast iron and nodular cast iron.

The meter has a large LCD and can measure a thickness ranging from 1.5 to 200 mm with 0.1mm resolution. Its sensor is ultrasonic having 5MHz frequency.

COMPUTING

Heavy-duty motherboard

The ASUS Sabertooth X58 motherboard is claimed to support the fastest

processors in the market, including the Intel Core i7-980X. As the latest entrant in the TUF Series of heavy-duty motherboards, it provides durability and reliability to users who demand 24x7, high-intensity usage.

The Sabertooth X58 can keep going round the clock with no pause, thanks to its meticulous thermal design, which means heat and stress are not obstacles. This new thermal design revolves around CeraMIX heat-sink coating technology, using revolutionary ceramic application on vital motherboard surfaces and components to ensure good heat resistance and dissipation. Thus it is ideal for server functionality and extreme, steady reliability.

The Sabertooth X58 costs Rs 17,250 (excluding taxes).

4GB DDR3 memory kits

Transcend Information has launched 4GB aXeRam DDR3-2400 dual-channel memory kits for use with Intel's LGA 1156 Core i7 systems. With the ability to operate at a fast clock frequency of 2400 MHz at 1.65V, these XMP-ready DDR3 kits are claimed to outperform

standard reference modules by approximately 60 per cent.

The kits boost system performance with a perfect combination of low voltage, high clock speed and low latency. Each kit contains two identically matched modules rated at 2400 MHz with timings of 9-11-9-28 and an operating voltage of a mere 1.65V, offering theoretical memory bandwidth up to 38.4 GB/s.

POWER SUPPLY

600VA back-UPS

APC by Schneider Electric has launched a high-performance, value-for-money 600VA PC UPS for home and SOHO environments and harsh Indian power conditions.

The BR600CI-IN UPS provides reliable backup for 21 minutes with its 7.5Ah battery, so users can continue to surf, chat, e-mail and download even during power cuts. Other benefits include automatic voltage regulation, fast battery recharge (within 8-10 hours), generator set compatibility (to ensure the UPS continues to power your PC even during extended power cuts) and intelligent staged battery charging that recharges the battery completely even through frequent power cuts.

650VA line-interactive UPS

Cyberstar Infocom has launched a 650VA line-interactive UPS from BPE for home and enterprise segments. The Switch 650VA is microprocessor-controlled, ensuring high reliability to the users. The built-in start function enables the UPS to start up without AC power supply and a green power function delivers improved energy efficiency. With auto restart during AC recovery, its input voltage range is 140-300V. The UPS has overload protection and boost-and-buck AVR to stabilise input voltage.
