

according to iSuppli, which defines a netbook as a notebook computer with a screen smaller than 26 cm (10.2 inches) that sells for about \$500.

Competitive pricing, strong channel distribution and faster time to market helped Acer ship 9.8 million netbooks to take a 37 per cent share of the market in 2009. Second-ranked ASUSTeK Computer of Taiwan had a 21 per cent market share with shipments of 5.5 million units.

## Semiconductor equipment spending to grow 122 per cent

Worldwide semiconductor capital equipment spending is projected to approach \$36.9 billion in 2010—a 122.1 per cent increase from 2009 spending of \$16.6 billion, according to market research firm Gartner. In 2011, semiconductor capital equipment spending will grow 4.9 per cent.

“The strong semiconductor growth in 2010 has driven semiconductor capital growth to all-time highs,” said Klaus Rinnen, managing vice president at Gartner. “Capital expenditure (capex) is above 95 per cent due to strong spending by the foundry and logic segments, along with a technology upgrade for the memory manufacturers. In 2011, capex growth is expected to slow to 10 per cent, because a slowing economy will negatively impact electronic and semiconductor sales.”

“Companies must prepare their manufacturing plan for a softer 2011, when equipment purchases will focus more on capacity than technology equipment,” Rinnen said. “They should also prepare business plans for the next equipment down cycle, starting in late 2012, because memory companies will have overinvested, thus generating excess equipment.”

## Mobile WiMAX subscriber base to reach 59 million in five years

According to ABI Research, the number of subscribers to mobile WiMAX services will approach 59 million in 2015. That represents a positive forecast in light of recent economic condi-
