

Calendar of Forthcoming Electronics Fairs/Exhibitions/Seminars

Name, Date and Venue	Topics to be covered	Contact address for details
India Telecom 2010 December 9-11, 2010 Pragati Maidan New Delhi	International conference and exhibition on cutting-edge telecom technologies and their commercial implications	Mayank Rastogi, Assistant Director Federation House, Tansen Marg, New Delhi 110001 Fax: (011) 23320714; Phone: 23766917 E-mail: mayankrastogi@fcdi.com Web: www.indiatelecom.org
Componex Nepcon India 2010 December 16-18, 2010 Pragati Maidan New Delhi	Trade fair on electronic manufacturing services	Rahul Deshpande, Reed Exhibitions India D-704 Rem Biz Court, Shah Industrial Estate Off. Veera Desai Road, Andheri West Mumbai 400053 Fax: (022) 67716601; Phone: 67716611 E-mail: rahul.deshpande@reedexpo.co.uk Web: www.componex-nepcon.in
LED Expo 2010 December 17-19, 2010 Pragati Maidan, New Delhi	Exhibition on LED products & technology	Media Exposition & Events 112-A, Sant Nagar, East of Kailesh New Delhi 110065 Fax: (011) 41620861; Phone: 26445191/2
VLSI 2011 January 2-7, 2011 IIT Madras, Chennai	International conference on VLSI design and embedded solutions for emerging markets	Kamakoti Veezhinathan IIT Madras E-mail: kamakoti@cs.ee.iitm.ac.in Web: http://vlsiconference.com/vlsi2011/
ElectronicsForYou Expo 2011 February 17-19, 2011 Pragati Maidan, New Delhi	An expo covering the complete electronics eco-system, including innovation, manufacturing, product design and product sales	EFY Enterprises Pvt Ltd D-87/1, Okhla Industrial Area, Phase 1 New Delhi 110020 Fax: (011) 26817563; Phone: 26810601/02/03 E-mail: efyexpo@efyindia.com Web: www.efyexpo.com

Look up under 'Events' section in www.electronicshandbook.com for a comprehensive list

Since this information is subject to change, all those interested are advised to ascertain the details from the organisers before making any commitment.

tions, although research analyst Xavier Ortiz notes that the growth of WiMAX has not been as early or as strong as many would have hoped several years ago.

The factors impeding WiMAX growth have not been technological, but economic and psychological: The recession certainly played a role, making investors wary and delaying some deployments. On top of that, delays in the formation of the new Clearwire have constrained the rest of the ecosystem to some degree, from subscribers to devices and chipsets.

Subscriber growth and base station shipments go hand in hand, and despite uncertainty among many operators as to which mobile 4G platform (WiMAX or TD-LTE) to choose, ABI Research forecasts continued growth for WiMAX base station shipments (albeit at a slow pace) through the current 2015 forecast period.

Wireless sensor network IC shipments bounce back

Demand for wireless sensor networks is showing significant growth following a period in which adoption was

impacted by the economic downturn. In 2009, 802.15.4 chipset shipments were down almost 30 per cent compared to the previous year.

But according to the latest ABI research on the wireless sensor network market, a strong uplift in shipments in 2010 will help drive growth from a little more than 10 million chipsets in 2009 to 645 million in 2015—a CAGR of 99.6 per cent.

Initiatives such as ZigBee RF4CE for home entertainment systems have already started to deliver significant market growth. And while ZigBee is far from the only 802.15.4-based technology delivering short-range wireless connectivity, it is leading in the early adoption of smart energy and home automation. Other key markets for wireless sensor network adoption are home, building and industrial automation.

84 per cent of rural India unaware of Internet

Lack of awareness and infrastructural set-up like electricity and proper Internet connection has deterred Internet penetration in rural India. About 84

per cent of rural India is unaware of the Internet.

These are the findings of a research jointly conducted by the Internet and Mobile Association of India (IAMAI) and IMRB.

The research says that 38 per cent of the rural population does not feel the need for the Internet. While 31 per cent of rural population does not have Internet access point, 25 per cent population has no Internet connection and about 22 per cent has no electricity.

The lack of personal ownership of digital gadgets is an impediment. At present, common service centres (CSCs) and cyber cafe are the primary mode of Internet access in rural areas, as more than 70 per cent of the rural population accesses the Internet through CSCs and cyber cafe.

Not enough room for 50 handset players

The handset segment in India will soon witness a shake-up similar to that in the mobile operators space where most new entrants are battling for survival.

Said D. Shivakumar, managing director, Nokia India, "It needs a strategy and a business model that can generate value. There is not a chance for 50 players in the handset space just as there is no chance for ten telecom operators to survive in India."

Drawing parallels with telecom operators industry, Mr Shivakumar added, "Price is not an innovation if you are not the lowest-price manufacturer. If you can produce a minute at the lowest cost, which I believe Bharti Airtel does, then everybody else is giving away margin. If you look at Indian business—be it detergent, retail or FMCG—price warriors have never succeeded."

AKAI forays into mobile handsets

AKAI, a Japanese consumer electronics brand, has entered the mobile handset segment in India with the launch of ten exciting models in the dual-SIM (GSM+GSM) category. The innovatively designed handsets are priced
