Are You In Suspense?

Are you wondering what happened to your order or payment, even after a fortnight? But did you mention your name and address clearly while sending payment, and what the payment was for?

We get several payments every month without adequate instructions or even identity of the person sending the payment. As a result we are unable to take appropriate action on these, till we get a complaint - if at all.

At EFY, we want you to be our satisfied customer. So please do let us know in case your payment or instructions are not even acknowledged within a fortnight. We are not that lazy!

browsing via the television, would be free, and Google would work with a variety of programme makers and electronics manufacturers to bring it to consumers.

"We will work with content providers, but it is very unlikely that we will get into actual content production," said Schmidt.

Sony has already agreed to have Google TV on its television sets, while Samsung is looking into using the service.

Android MP4 player

Philips' GoGear Connect takes the next step for MP4 players, being the first Wi-Fi-enabled MP4 player to offer the full Android experience. It comes pre-installed with Google Mobile applications and more than 100,000 apps can be downloaded from the Android Market. Android allows you to multi-task, so you can listen to

Philips' GoGear Connect

music, look at maps and use location-based services, all at the same time.

The player has an 8.1cm (3.2-inch) touchscreen and a built-in camera to shoot videos and pictures. Sound-isolation earphones block out background noise and provide a clear and detailed music experience even in noisy surroundings. Philips Songbird—an easy-to-use program—makes syncing music from your PC hassle-free.

The gadget will be available in Western Europe, USA and China from October this year.

Strong password doesn't mean you are safe

Changing your password frequently and making it tougher to imagine

for hackers don't alone protect your PC account from being hacked. You also need to put off the Keylogger software that records all keystrokes—including the strongest password you enter—and surreptitiously sends the information to a remote location. This software is deposited on the PC by a virus.

"Keeping a keylogger off your machine is about a trillion times more important than the strength of any of your passwords," said Cormac Herley, a principal researcher at Microsoft Research who specialises in security-related topics. He said antivirus software could detect and block many kinds of keyloggers, but "there's no guarantee that it gets everything."

World's first dual-cell HSPA+ /LTE network

At the LTE Asia 2010 Conference, CSL, Hong Kong's mobile network operator, in partnership with ZTE, a global provider of telecom equipment and network solutions, demonstrated CSL's progress to becoming the first in the world to simultaneously deploy dual-cell HSPA+ (42 Mbps)/LTE technologies on an entire network.

CSL and ZTE demonstrated live LTE service with pre-commercial USB

modems running various broadband, multimedia applications, including high-speed file download/upload, Internet browsing, HD video download and streaming performance, and many other features that will resonate with the next generation of mobile users.

While CSL's Next G network in Hong Kong has already helped to introduce a slew of mobile applications for consumers, LTE will improve customer experience for applications including HDTV, mobile blogging, gaming and e-learning.

First single-chip 4K format

Altera claims to have announced the industry's first single-chip 4K, format-conversion reference design
