

Sensor IC Solutions for Today's Changing Automotive World

Motor Position Sensing

Digital sensor ICs capable of handling the wide speed range and noisy environment found in motor position applications

Engine Management

Extensive design experience has made Allegro the leading crankshaft speed and direction IC supplier to the stop/start market

Transmission Speed

Allegro's speed and direction sensing ICs incorporate advanced algorithms to ensure accurate system performance under severe conditions such as large rotational vibration

Wheel Speed Sensing

Allegro's wheel speed sensing ICs are capable of handling the harsh conditions common to ABS applications including damaged tone wheels or encoders, ferrous debris, and large temperature gradients.

Sensor packages that simplify magnetic system design in automotive speed sensing applications.

Industry leading solutions and support

For more than 25 years, Allegro MicroSystems, Inc. has been a leading automotive supplier of Hall-effect sensor ICs and advanced mixed-signal power ICs, with experience in servicing the demanding application requirements found in transmission, engine management, braking, and other highly accurate systems.

Allegro is committed to continue working alongside our customers in developing high-reliability sensor ICs, while our local sales and technical resources ensure that our customers quickly and effectively receive high-quality service and products.

Customized features for automotive applications, including:

- Highly accurate direction detection capability
- Vibration immunity
- On-chip protection circuitry
