With increased concern in recent years about saving energy, continual improvements are being made in energy efficiency. With inverters, for example, continual increases in efficiency means power devices are becoming faster and higher in voltage. And as typified by automobile electronics, multiple CPUs are being utilized for finer control and more advanced functionality. R&D labs devoted to such products increasingly require isolated high withstand voltage measurements at higher sampling rates, as well as the ability to simultaneously measure greater numbers of signals for longer periods of time.

Against this background Yokogawa has developed **DL850 ScopeCorder** with greater measurement flexibility. It combines the benefits of an oscilloscope and a data acquisition recorder into a single, versatile measurement and analysis tool.

Main features:

- High-speed (up to 100 MS/s, High Resolution (up to 16-Bit), Isolated (up to 1kV)
- Multi-channel, up to 128 voltage or 128 logic bits
- Continuous hard disk recording at 100 kS/s simultaneously on 16 channels
- CAN bus monitoring and trend waveform display (DL850V only)
- 15 plug-in modules

QUALITY ■ INNOVATION ■ FORESIGHT
