Marketing, Sony India

size, native pixel count, scaling, motion response time, contrast ratio and viewing angle would be the foremost distinctive features that one should look for. Sound clarity and size come along with these distinctive qualities. LG's IPS technology is well equipped with all of these," says Jongsik Yoon, general manager, TV Department/TV Global Promotion Team from LG's IPS (In Plane Switching) Technology.

Videocon claims to be the only player in the market to have launched Satellite LCD—an LCD TV with inbuilt D2H. Apart from this, it has launched new series in both LCD and LED TVs with slim looks and features like energy meter, capture logo, 120Hz refresh rate, Full HD, SRS sound technology and Nanopix technology.

Godrej, on the other hand, has come up with a gaming LCD TV that combines the features of an interactive gaming console with an LCD TV. It has a variety of 25 preloaded games. And for the ones with an insatiable appetite for gaming, the television also allows loading extra games through an SD card or USB. The TV is priced at Rs 40,000.

Haier LCD and LED TVs come with motion gaming, USB movie, card reader, nine-band equaliser, DSM engine, etc.

Launch of many more models is in the pipeline. Rohit Pandit, home

entertainment head, LG Electronics India, informs, "Currently, we have 44 SKUs in our FPD portfolio, which we will augment in H2 with seven new LED SKUs taking our LED Infinia range to 20 SKUs and the total FPD line up to 51."

Price. Mostly plasma TVs are not available in screen sizes below 107 cm (42 inches). LCD and LED, on the other hand, are available across all screen sizes. At present, LED TVs are available at almost double the price of LCD TVs, but this difference is coming down day by day. Plasma and LCD prices are nearly equivalent (with plasma TVs being slightly cheaper) but most brands are focusing on LCD and LED TVs only.

Sony's LED TVs are available at a starting price of Rs 52,900, while LCD TVs start at Rs 16,900.

Toshiba's 107cm LED TV costs Rs 96,000 compared to Rs 44,800 for a same-size LCD TV.

"Panasonic has launched 81cm (32-inch) LCD TVs specifically developed for India. Priced at Rs 25,900, these come with powerful sound (as Indians are fond of music) and lowest power consumption (78 watts) in their category. These LCD TVs are basically trimmed down versions (with one HDMI port, not two or three) to keep the cost lower," says Manish Sharma, director-marketing, Panasonic India.

Sony 55HX800

Features

- Full HD 3-D
- BRAVIA Internet Video
- Motionflow 200Hz Pro
- BRAVIA Engine 3 high-definition video processor, which reproduces pictures with higher contrast, superior colours and amazing clarity
- Ambient sensor, which reads the brightness and colour temperature of the surroundings and adjusts the image accordingly so you'll always get the best picture possible all the time, at any time.
- Wi-Fi ready
- LED backlight
- Deep Black Panel

Price: ₹ 259,900
with two glasses, 3-D enabled
BD player (BDP-S470C/SM),
and nine disks of 3-D content

companies are coming up with more and more models of LCD and LED TVs. So you have a wide variety at different price points to choose from.

"To make the best pick, right screen
