₹ 300,000

sation of multidimensional 3-D effects, real-time 2-D/3-D conversion function and less than one per cent cross-talk.

How 3-D TVs differ from 3-D in theatres?

You must have experienced newer 3-D presentations, such as IMAX 3-D, in movie theatres. Though the technologies differ somewhat, the main practical difference between 3-D TV in the home and theatrical 3-D is the size of the screen. In the home, the image is generally much smaller, occupying a lower percentage of viewers' fields of vision.

3-D in the theatre is not Full HD,

whereas 3-D TVs offer full HD quality.

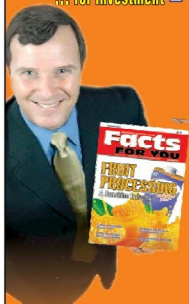

Also, "3-D in theatre is watchable through passive glasses (battery not required), while for viewing 3-D TVs battery-operated active 3-D glasses are essential," informs Tadato Kimura, General Manager, Marketing, Sony India.

Another advantage of 3-D TV at home as opposed to the theatre is user control. You can generally sit where you want relative to the screen at home, and some 3-D compatible TVs provide some control over the 3-D experience in addition to standard picture settings. Some models, for example, allow you to adjust the G axis, or the amount of 3-D effect, to your
