

NISSAN MICRA

Fit for Tech-Savvy!

The recently launched Nissan Micra has some advanced electronic features that you may not find even on many top-end cars. Here's a review by EFY experts

■ ADITYA DIMRI & PRADEEP ABBI

The Micra from Nissan Motors joins the Indian small car segment targeting young, urban, connected consumers. Features making it stand apart from rest of the B-segment lot are intelligent key system, engine start/stop button, auto climate control and electrically folding mirrors. Also, it is high on safety with features like antilock braking system and security alarm.

To start with, the intelligent key system allows you a keyless entry into the car. A little black button on the

door handles of the front two doors is the request sensor. The same button is on the boot as well. You can open the door by pressing this button as long as the key fob is in your pocket and you are within 0.9 meter of the car.

The key fob also contains the main key inside, which can be taken out of the fob easily during emergency. Say, when the battery of the key fob dies, this skeleton key tucked inside the key fob comes to rescue as it lets you open the car in traditional way.

However, there is a negative point: Before driving off, you need to press the 'lock' switch on the control panel

to lock all the doors. Else, anyone may open the boot of your car and get away with all your belongings inside (including the spare tyre if he is quick enough)! He just has to press the tiny black request button on the boot to open it up.

Coming to engine start/stop button, besides Micra, only Chevrolet Cruze worth Rs 1.3 million offers this great feature. When you enter Micra at night, the first and only illuminated thing inside the car is this button with clean orange backlight. To start the car, you need to first press the clutch (it is mandatory) and then press this
